

ARTIFICIAL INTELLIGENCE IN HEALTHCARE

IBM WATSON HEALTH

Name : Mohanad Yassin

- AI in modern healthcare
- Case study: IBM Watson Health (Oncology)
- AI as clinical decision-support system

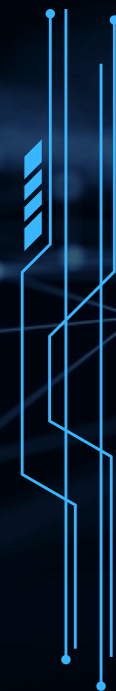

AI TECHNOLOGY & IMPLEMENTATION

- Machine Learning & Natural Language Processing
- Analyzes medical records + research data
- Provides ranked treatment recommendations
- Partnered with Memorial Sloan Kettering

BENEFITS OF AI IN ONCOLOGY

- Fast processing of medical data
- Evidence-based recommendations
- Support for physicians
- Standardization of treatment
- Potential global access

CHALLENGES AND LIMITATIONS

- Inaccurate treatment suggestions
- Limited training data
- Integration difficulties
- Overpromising capabilities

ETHICAL & SOCIETAL IMPLICATIONS

- Transparency
- Fairness & Bias
- Accountability
- Privacy
- Public trust

FUTURE & RECOMMENDATIONS

- Explainable AI systems
- Diverse and unbiased datasets
- Clear accountability frameworks
- Stronger data protection
- AI supporting ... not replacing doctors
